SUMMARY

Highly motivated and results-oriented Information Technology graduate with a concentration in Cloud Computing. Possesses a strong foundation in cloud engineering, data analysis, and software development, with hands-on experience in deploying and managing cloud environments. Proven ability to build CI/CD pipelines, automate workflows, and enhance system security. Eager to leverage technical skills and a proactive approach to contribute to innovative cloud solutions.

EDUCATION

George Mason University | Fairfax, VA
Bachelor of Science | Information Technology

May 2025

EXPERIENCE

Junior Cloud Engineer | NecX

July 2025 – Current

- Configured & Deployed secure Azure production environments (Container Apps, PostgreSQL, Log Analytics) within isolated VNets, supporting 3+ services across internal and client-facing systems.
- Hardened network architecture using private endpoints, VPN gateways, subnet segmentation, and NSGs, eliminating public exposure of critical resources and securing 10+ cloud components.
- Implemented Entra ID RBAC and Azure Key Vault for centralized secret storage and controlled access, reducing manual credential handling and minimizing exposure risk across staging environments.
- Built CI/CD pipelines with GitHub Actions and Azure Pipelines, reducing deployment time by 40–50% and improving release consistency.
- Configured DNS forwarding and private connectivity solutions; documented identity and VPN architecture to streamline future environment onboarding.

Time & Product Manager | Dreamers Mothers In Action (DMIA) | George Mason University

August 2024 – May 2025

- Collaborated with team of 6 & nonprofit sponsor to gather and document technical requirements for digitizing & automating event management outreach & reporting workflows.
- Designed and implemented integrated solutions using Eventbrite, Sender, Zapier, and Google Business tools, reducing manual promotion time by 60-70% and saving 10-15 hours per event.
- Facilitated technical requirements gathering sessions with stakeholders to document functional specifications and translate business needs into scalable digital solutions.
- Developed automated reporting dashboards and multilingual event pages, enabling real-time analytics and data-driven decision-making.

Extern / Web3 Security Data Analytics Externship | Webacy

Summer 2024

- Automated data workflows in Python to support risk profiling and intrusion detection.
- Conducted smart contract vulnerability analysis and enhanced clustering methods for threat detection.
- Delivered actionable insights through structured data analysis and reporting.

PROJECTS

Crex: Manga Translation Pipeline

- Developed a backend pipeline to process scanned manga/manhwa pages, extract dialogue using OCR, and translate it into multiple languages using AI services
- Built modular services for image upload, text extraction, translation, and result packaging with future scaling in mind
- Implemented logging, metadata tagging, and designed error-handling logic to ensure translation consistency and traceability
- Actively iterating on pipeline architecture, integrating database storage (DynamoDB) and planning automated deployment with GitHub Actions and AWS SAM

Cloud Resume Challenge

- Building a cloud-native portfolio site with a serverless backend using AWS services: S3 (hosting), API Gateway, Lambda (backend), and DynamoDB (data)
- Implemented CI/CD using GitHub Actions to automate builds and deployments
- Designed backend with secure API endpoints and scalable infrastructure as code (CloudFormation or Bicep planned)
- Focused on demonstrating real-world cloud skills across deployment, automation, access control, and clean DevOps workflows

Cloud-Based Web App Development

- Designed and deployed a serverless translation backend on AWS using Lambda, SQS, API Gateway, and DynamoDB, integrating Amazon Translate to handle multi-language input and response workflows
- Developed a full-stack cloud-native web app using AWS CloudShell, S3, DynamoDB, API Gateway, and Lambda.
- Built REST APIs and IAM-secured endpoints with dynamic data handling and CloudWatch monitoring.

HONORS & AWARDS

- Dean's list, Spring 2022 – Spring 2025

SKILLS

- Programming Languages: Python, JavaScript, Node.js, C++, SQL, Java, PowerShell, Bash, Shell.
- Cloud Platforms: AWS (EC2, Lambda, S3, RDS, DynamoDB, VPC, IAM, CloudWatch), Azure.
- Tools: Github, Docker, Postman, MySQL, Jira, AWS CLI, Excel, Google Sheets, Azure CLI.
- Concepts: Linux Systems, API Design, IAAC (AWS SAM, Azure Bicep), CI/CD, Networking (TCP/IP, VPNs, Firewalls), Event-Driven

Architecture, Security Testing, Cloud Security, Virtual Networks, IAM, Cloud Cost Monitoring, Active Directory, MFA, PKI, NTP, Microsoft 365.

- Operating Systems: Linux (Ubuntu, Kali), Unix, Windows, macOS.
- Certifications: AWS Solutions Architect Associate, AWS Certified Cloud Practitioner, Google Cloud AI Foundations, Network+ (in progress).
